Midhurst Grammar School  
Midhurst

## Computing Skills

---

- ✓ ITIL V3 Foundation Certified
- ✓ Novell Platespin trained - (Recon, Migrate & Protect)
- ✓ VMware trained - VCP2 4.1 (Install, Configure, Manage)
- ✓ Working knowledge and experience of server infrastructure from purchase to installation and configuration for a wide range of companies from start-ups to major corporations on HP-UX, Linux and Windows based rollouts.
- ✓ Considerable documentation knowledge and experience of creating and developing detailed build guides, test and operational acceptance documentation and detailed security documentation for numerous environments.
- ✓ Excellent ability to configure, operate and administer in numerous UNIX/Linux environments (HP-UX-Red Hat Linux).
- ✓ Excellent ability to configure, operate and administer in all Windows environments 3.1 – Windows 7
- ✓ Expert hardware knowledge including servers, mainframes, desktops and laptops.
- ✓ UNIX/Linux shell scripting abilities to automate many procedures.

## Personal Skills

---

- ✓ Leadership – Experience of leading teams of varying sizes to accomplish tasks to specific aims and restrictions whilst developing personnel and working to the teams strengths.
- ✓ Team Work – Working within teams of varying experience and knowledge to achieve project success.
- ✓ Presentations – Capable of delivering material both new and developed to customers and teams.
- ✓ Driving License – I hold a full clean driving license.

## Work Experience

---

(Aug'10 – )

**Technology Consultant: Infrastructure Consulting** – My current role working for one of the world's leading information technology multinational corporations involves being part of a dynamic and focused team of consultants who work on a per-project basis to specific customer requirements within a specific customer environment. Within this role I have implemented HP-UX and Linux based infrastructure and with requirements garnished from customers produced detailed build guides, test and operational acceptance documentation, detailed security documentation specific to the customer whilst also including current best practice whilst also liaising with other specialists to ensure project success throughout the associated companies.

(Jun'08 – Jul'10)

**UNIX Systems Administrator: CAD & CAE Systems** - I initially worked for the European Aeronautical Defence and Space Company: Astrium on a fourteen month contract. EADS Astrium is a large satellite company that are primary contractors for the MoD and ESA. For this role I worked as part of a team of ten split between two sites. I coordinated many projects and sub-projects for this role including migrating HPUX servers to a Linux virtualised system, maintaining and constructing new systems, workstations and servers and also writing related UNIX scripts. At the end of my fourteen month contract I was asked to continue, which I accepted.

(Aug'03 - Jun'05)

**Server Administrator** – My role for this small to medium sized Internet Service Provider involved working with business customers to evaluate and decide upon long term solutions for large scale internet hosting and utilization. My role also involved the construction and application of the designated system. Working effectively and directly with a close team was integral for the success delivery of projects. This role enabled me to develop and implement many solutions to solve and streamline existing customer environments in a controlled but established manner.

## Personal

---

In my personal life I am a keen badminton player and gym member and believe it is important to stay fit and healthy whilst also being a determined worker. I am also a keen traveller and wherever possible aim to explore as much as possible with a goal set to explore a new country once every year.

I enjoy socialising both with friends and family but also with colleagues at both personal and social events. I follow football and am a keen Doncaster Rovers and Manchester United fan proving I enjoy both difficult but worthwhile and simple solutions.
